To our Obstetrical patients,

Modern technology has allowed enormous development in the area of ultrasound. Traditionally we have been offering 2D dimensions that give us anatomical views of the fetus and also allow us to get accurate measurements of the size for dating purposes.

The 3-D and 4-D scans are not a substitute for your regular ultrasound that is done by your regular OB-GYN doctor. This is a fun scan; it does not check for anatomical abnormalities of the fetus and is not covered by insurance. This is only to give you a 3-D picture of your baby and a 4-D recording. The best time to do this scan is at **30** to **34** weeks. The fee is payable at the time of the visit, please call our office for details and prices.

Sometimes it is not possible to get a good picture due to the position of your baby. In that situation, we will try and do our best for you but because this requires even more time to do the ultrasound, fees are still the same and payable at the time of visit.
